que lo diga el speech 

"We wanted the design to be as precise as possible with an essential simplicity, since it is primarily aimed at people with visual disabilities."

"Going deeper into functionality, we sought to make the interface as intuitive as possible, since our target audience requires it and it is always highly valued on an aesthetic and understanding level."

“For this design, I think that without a doubt, something that puzzled us was achieving a view that was striking, intuitive and simple enough so that everyone feels comfortable and attracted to what they see on the screen.”

Mascota:

“Since we wanted to empathize and entertain our visitors by trying to achieve an eye-catching design, we created a mascot named Coco.”

color palette

"We chose this color palette specifically because it helps us reflect a vision of respect and inclusion where everyone is welcome."
